FEATURES:

ADMIN / SCHOLAR Access & Actions:

- Scholarship types and rules
- Records of Scholars
- Document Reviews
- Compliance Results
- Admins Renewal Decisions
- Scholar Account
- My Status
- Documents
- Notifications

ADMIN Access & Actions:

Rule-based Scholarship Compliance Monitoring and Renewal Management System of the University of Luzon, login and logout control and account creation for scholars can only be carried out by authorized administrators; scholar accounts will never be made through any self-registration and will only be created by an administrator when a student registers officially in the University of Luzon.

Scholarship types and Rules

The authorized personnel have the ability to define and modify scholarship types for example CHED, DOST, and City Mayor's Scholar. Define, modify, or deactivate the rules for each scholarship type, for each academic year and semester, which include minimum GPA, minimum units enrolled, supporting documents, and submission deadlines.

Records of Scholars

Authorized personnel register the recently recognized scholars to establish their scholar profiles and also set up their login details within the system; they can manually input or import the semester grades and unit load of the scholars into the system.

Document Reviews

The personnel have the ability to view the documents submitted by the scholars and then categorize them as either "Verified" or "Rejected"; a comment should be made explaining the reasons for such actions.

Compliance Result

Check the results of compliance in full view, sorted by academic discipline, compliance status, and scholarship type; understand the reasons for each scholar's compliance through a step-by-step explanation of all the rules; and download the results table as a CSV file.

Admin Renewal Decisions

This feature allows the scholarship administrators to review the compliance results of scholars. It provides a summary of whether each scholar has met the required GPA, unit load, and documents. The admin can use these results as a reference when making the final scholarship renewal decision.

Scholar Account

This feature provides scholars with their own accounts where they can securely access their scholarship information. Scholars can view their personal details, compliance requirements, documents, and current scholarship status in one place.

My Status

This feature allows scholars to monitor their current scholarship compliance status. It displays whether they have passed the required conditions and identifies any requirements that are still incomplete or not met.

Documents

This feature allows scholars to submit and monitor their required scholarship documents. The system tracks the status of each document and helps identify missing, incomplete, or late submissions.

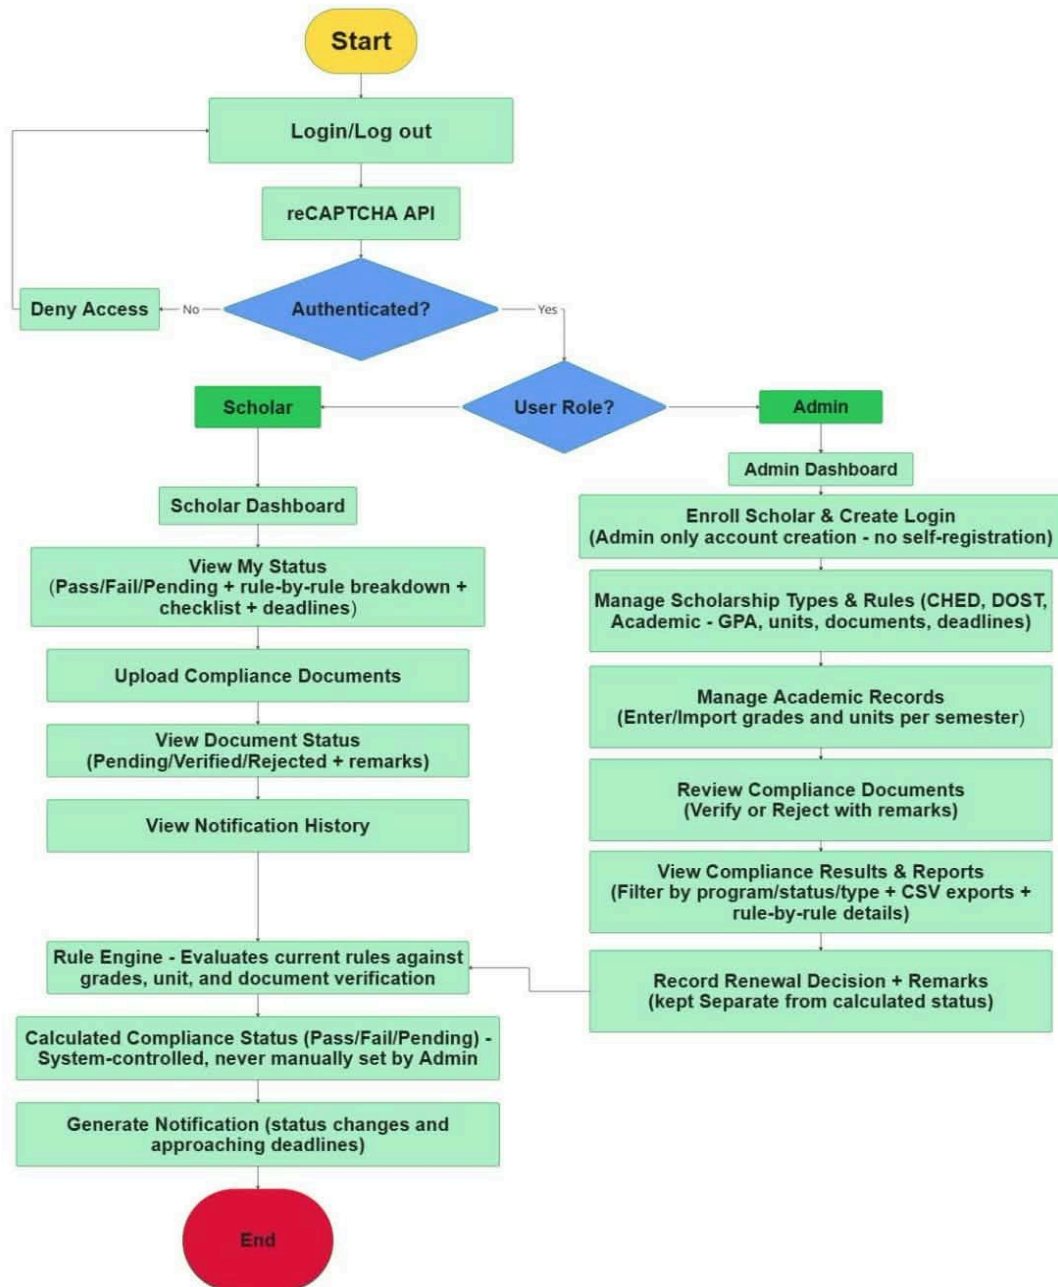

Notifications

This feature provides scholars and administrators with important updates regarding scholarship compliance. It can notify users about missing documents, upcoming deadlines-related updates.

RUBRICS — GROUP OUTPUT (60 POINTS)

NOTE: The diagram must be on the page after the rubrics

	5	10	15	20	Score
Accuracy and Logic of Flow	Major flow errors make the diagram difficult to follow.	Flow partly represents the system but has several errors.	Flow represents the system with minor errors.	Flow accurately and logically explains how the system works throughout.	
Completeness of Processes	Most major processes and components are missing.	Some processes are shown, but important parts are missing.	Most required processes are included, with minor omissions.	All major processes and required components within the scope are included and connected.	
Symbols, Labels, and Readability	Mostly incorrect symbols, missing labels, and confusing layout.	Several symbols or labels need correction; layout needs work.	Mostly correct symbols and labels; readable layout.	Correct symbols for the diagram type, clear labels, and an easy-to-follow layout.	

INDIVIDUAL GRADING RECORD

Member's Name	Specific Contribution	Group/60	Individual/40	Total/100
Cobe Osorio	Flowchart Diagram Creation			
Dahrel ann D. Fernandez	Documentation			
Dustin D. Lomibao	Documentation			
Marl Louise A. Manuel	Flowchart Diagram Creation			
Geraldo C. Querol Jr.	Flowchart Diagram Creation			
Arlyn C.Visperas	Documentation			

Final score per member = Group score (60) + Individual contribution (40) = 100 points
